

tia® Scan Server

FEATURES

- Communication between client and server via http/https
- Validated transfer based on MD5 hash values
- High-availability solution
- Supports internal or external databases

BENEFITS

- Does away with distributed profiles
- Does away with distributed client license import
- Distinguishes between profile administrator and user
- User names adopted from ActiveDirectory

tia® Scan Server facilitates the rapid and intuitive management of scan client profiles and scan licenses in a centralized manner. This makes tia® Scan Server the ideal supplement to kgs Scan, allowing companies to maintain consistent and centrally organized scan solutions. tia® Scan Server manages locally created profiles in so-called profile groups. It only takes a few mouse clicks to assign these groups to any users (LDAP account) ensuring that new users can immediately draw on existing profiles. As a result, time-consuming new generation of scan profiles following hardware replacement becomes a thing of the past. Automatic versioning furthermore takes care of keeping scan clients up to date by assigning profiles based on the 'pullmethod', thus doing away with the need for manual assignment. Scan licenses are managed on a per workstation basis, and here too, direct assignment and release is a simple process. In addition, tia® Scan Server ideally complements tia® Document Router in order to implement filing scenarios, for instance late archiving with barcode. tia® Scan Server equally caters to the needs of small companies and international corporations.

About kgs:

KGS Software GmbH, headquartered in Neu-Isenburg near Frankfurt am Main, has been the digital archive specialist for top companies worldwide for over 20 years. Data and documents from SAP as well as documents from other leading applications are migrated and archived using high-performance, lean software. Under the brand "tia®" - the intelligent archive - the archive manufacturer has been uniting all kgs product modules into a common vision of the intelligent document archive since 2020. tia® stands for autonomous archiving, is connectable to any applications, storage solutions and cloud technologies and offers companies the single point of truth (SPoT) for accessing documents. kgs has been certifying ArchiveLink® and ILM interfaces for SAP worldwide since 2005 and is a global SAP Value Added Solutions Partner.
