

tia® Content Server

High performance archive for the needs of SAP archiving

As a lean solution, the SAP archive system enables legally compliant document archiving, data archiving and archiving of print lists via the SAP standard interfaces ArchiveLink, the new cloud-optimised standard CMIS and for SAP BC-ILM. Of course also with S/4HANA.

The functions are designed to perfectly accommodate the requirements of SAP systems. As opposed to traditional DMS or ECM systems, functions that are already provided by the SAP system were consistently dispensed with during development. The resulting lean and extremely

fail-safe system architecture meets even the most stringent performance requirements.

Benny Schröder / Head of R&D at KGS Software GmbH

The tia® Content Server is at the core of our product suite. The server, which is undergoing constant improvement, has a proven track record that goes back over 20 years.

At a glance

- Universal, platform-independent archiving solution for archiving any content
- Communication via standardized SAP ArchiveLink® interface, SAP BCILM interface and CMIS
- Certified for SAP ArchiveLink® 7.40 (including load test) and for SAP Information
- Lifecycle Management (BC-ILM 3.1 & S/4BCILM 1.0)
- Supports all SAP releases R/3 and later

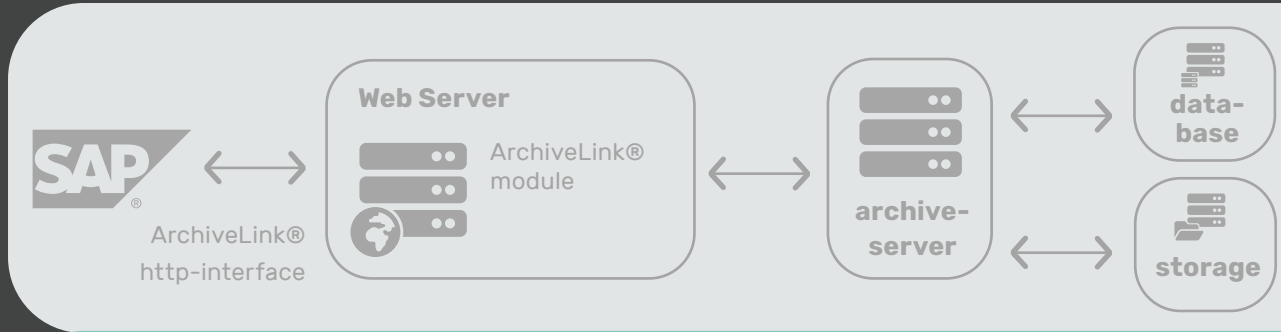

Benefits

- The tia® Content Server does away with the need for additional archive and database servers such as ECM or DMS systems
- Extended range of functions when combined with other kgs products
- Low-maintenance solution: minimal installation and administration effort
- Basic SAP skills are absolutely sufficient to manage the solution
- Supports any common storage type

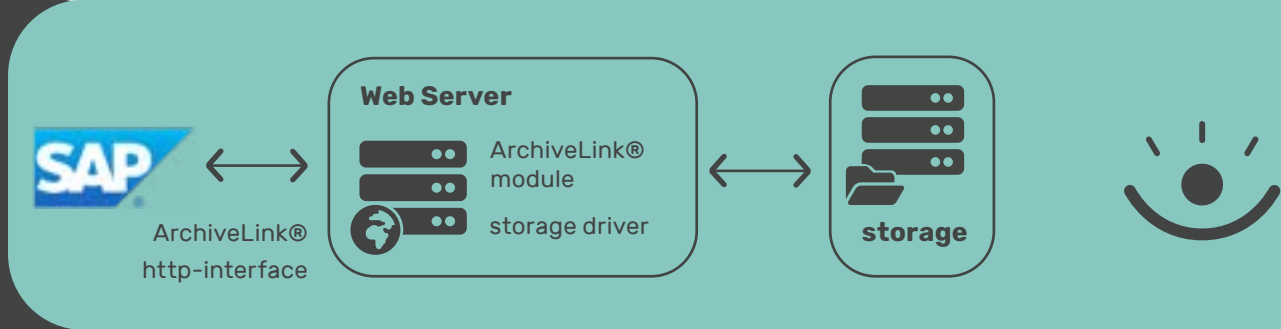

In contrast to classic DMS and ECM systems, the Content Server consistently dispenses with functions that are already provided by the ERP. The resulting lean and extremely fail-safe system architecture meets even the most stringent performance requirements. Moreover, customers benefit from substantial savings as they do not need to operate additional ECM/DMS systems!

Legally compliant

The tia® Content Server archives documents and data in a legally compliant and audit-proof manner that also allows for convenient viewing at any time.

puristic

In contrast to classic DMS and ECM systems, the Content Server consistently dispenses with functions that are already provided by the ERP.

SAP

The archive for SAP for legally compliant document and data archiving plus archiving of print lists via the interfaces Archive-Link, CMIS and BC ILM.

About kgs

KGS Software GmbH with headquarters in Neu-Isenburg near Frankfurt am Main, has been the digital archive specialist for top global companies for over 20 years. Data and documents from SAP as well as documents from other leading applications are migrated and archived using efficient, lean software.

Under the brand „tia®“ – the intelligent archive – kgs has been uniting all product modules into one common vision of the intelligent document archive since 2020. tia® signifies autonomous archiving, can be connected to any applications, storage solutions and cloud technologies and provides companies with the single point of truth (SPoT) for accessing documents. Since 2005, kgs has been certifying ArchiveLink® and ILM interfaces for SAP worldwide and is a global SAP Value Added Solutions Partner.

Dr. Marco Lenck / Former Head of Group-IT at
DÖHLER

With the kgs archive running in the background, we have been able to carry out a complete SAP transformation within the company, from SAP ECC through MaxDB and SAP Suite on Hana, and finally, to S4/HANA. We didn't have to adapt anything in the archive throughout the whole process and were able to concentrate solely on the implementation of S4/HANA.
